Statement on ChatGPT Usage

We used ChatGPT to support this project in the following ways:

- **Writing support**: rephrasing and editing sections of our report for clarity, readability and avoiding grammatical errors.
- **Code assistance:** checking syntax, debugging errors.
- **Concept clarification:** we used a language model specialized for causal inference to discuss misunderstood concepts.

All key decisions regarding data selection, model design, estimation methods, and interpretation of results were made by us. ChatGPT was used as a supplementary tool for explanation, editing, and troubleshooting.
